Auto Export Shield™ provides state-of-the-art protection against exporters.

Our proprietary data feed can help your dealership quickly and reliably identify high risk buyers before it's too late

Auto Export Shield is the first software to be developed with the ability to protect auto dealerships from exporting scam artists—potentially saving your dealership thousands of dollars. Our proprietary database provides access to real time data allowing dealership to identify potential exporters before the deal is finalized. Auto Export Shield provides 360° protection:

- Immediately identifies high-risk buyers.
- Real time data feeds.
- Tracks car purchase data from across the country.
- Comprehensive access to data by combining multiple data sources.

Auto Export Shield pulls information from numerous sources including financial records, car purchasing history and proprietary databases to assign a risk rating for each buyer. If the system identifies any information that indicates that the pending purchase could be for export, an alert is sent to the dealer that a potential high-risk buyer must be investigated before the transaction is completed. By arming your sales team with the best, most comprehensive real time information available, your dealership is empowered to help prevent the export of luxury vehicles.

The Auto Export Shield system is easy to use. One quick and easy step can save thousands of dollars.

- Access from any computer—no special software is required
- Login and provide the same information you use for a standard credit check.
- A proprietary risk score is generated alerting you to high risk buyers.
- An alert e-mail is sent to the management team at the dealership for redundancy and to ensure transparency.

A true story

Exporters are becoming an expensive issue for many car dealers. To combat the trend, manufacturers are cracking down on dealerships who sell to exporters with substantial fines and penalties.

Recently, a luxury car dealer fell victim to an exporting scam and inadvertently sold a car to an exporter due to management shortcomings and an astute exporter. The manufacturer found out, called a meeting with the dealership to discuss the issue, and then fined the dealer for the sale and reduced their allocation. The result for the dealer was thousands of dollars of lost revenue, a black mark with the manufacturer, and morale issues with the sales staff who are working hard to sell cars responsibly.

Unfortunately, this occurs all too often. Moreover, it is the dealer that's caught in the middle and on the hook for the lost revenue. Going forward, do dealers risk a sale or risk fines and penalties because they aren't able to identify high-risk buyers? Auto Export Shield provides the protection to confidently sell to responsible buyers and lock out the exporter.

Is your dealership a target?
The experts at Auto Export Shield™ can help.

State-of-the-art technology keeps your dealership safe

AutoExportShield™ is built from the latest in database technology, constantly updating from multiple sources to ensure that users have access to real time information. The software resides on cloud servers, i.e. a network of multiple CPUs, instead of on one or two traditional servers. Users enjoy the following benefits:

- 100% uptime – there is no main server to crash
- Pages will never run slow – variable CPU power ensures consistent speed, regardless of usage spikes throughout the day
- Impervious to network service attacks – hackers can't bring the system down
- Custom framework for input filtering – additional security compared to an open source framework
- MD5 encryption – variable length encryption ensure that data is safe

Seconds can save thousands

The process is as simple as a standard credit check. It takes just a few seconds to input the data then AutoExportShield generates a proprietary risk score based on several criteria. If the potential buyer could be an exporter, a warning is immediately generated. In addition, the dealership management team can be notified by e-mail and/or the next time they login.

Frequently Asked Questions

How many users can I have at my dealership? Is there a per user license fee?

AutoExportShield requires a monthly service fee for access to the database. This fee includes an unlimited number of Basic and Management level users for your location.

Is my data safe?

The experts at AutoExportShield are committed to the security of your data. We utilize the latest in encryption and database security technology so you can rest assured that your data will never be compromised.

How is the risk score calculated?

The proprietary AutoExportShield risk score was developed by a team of auto dealer veterans and takes into account nearly a dozen sales transaction key factors. Its calculation provides an instant and clear indication if the potential buyer may be an exporter.
